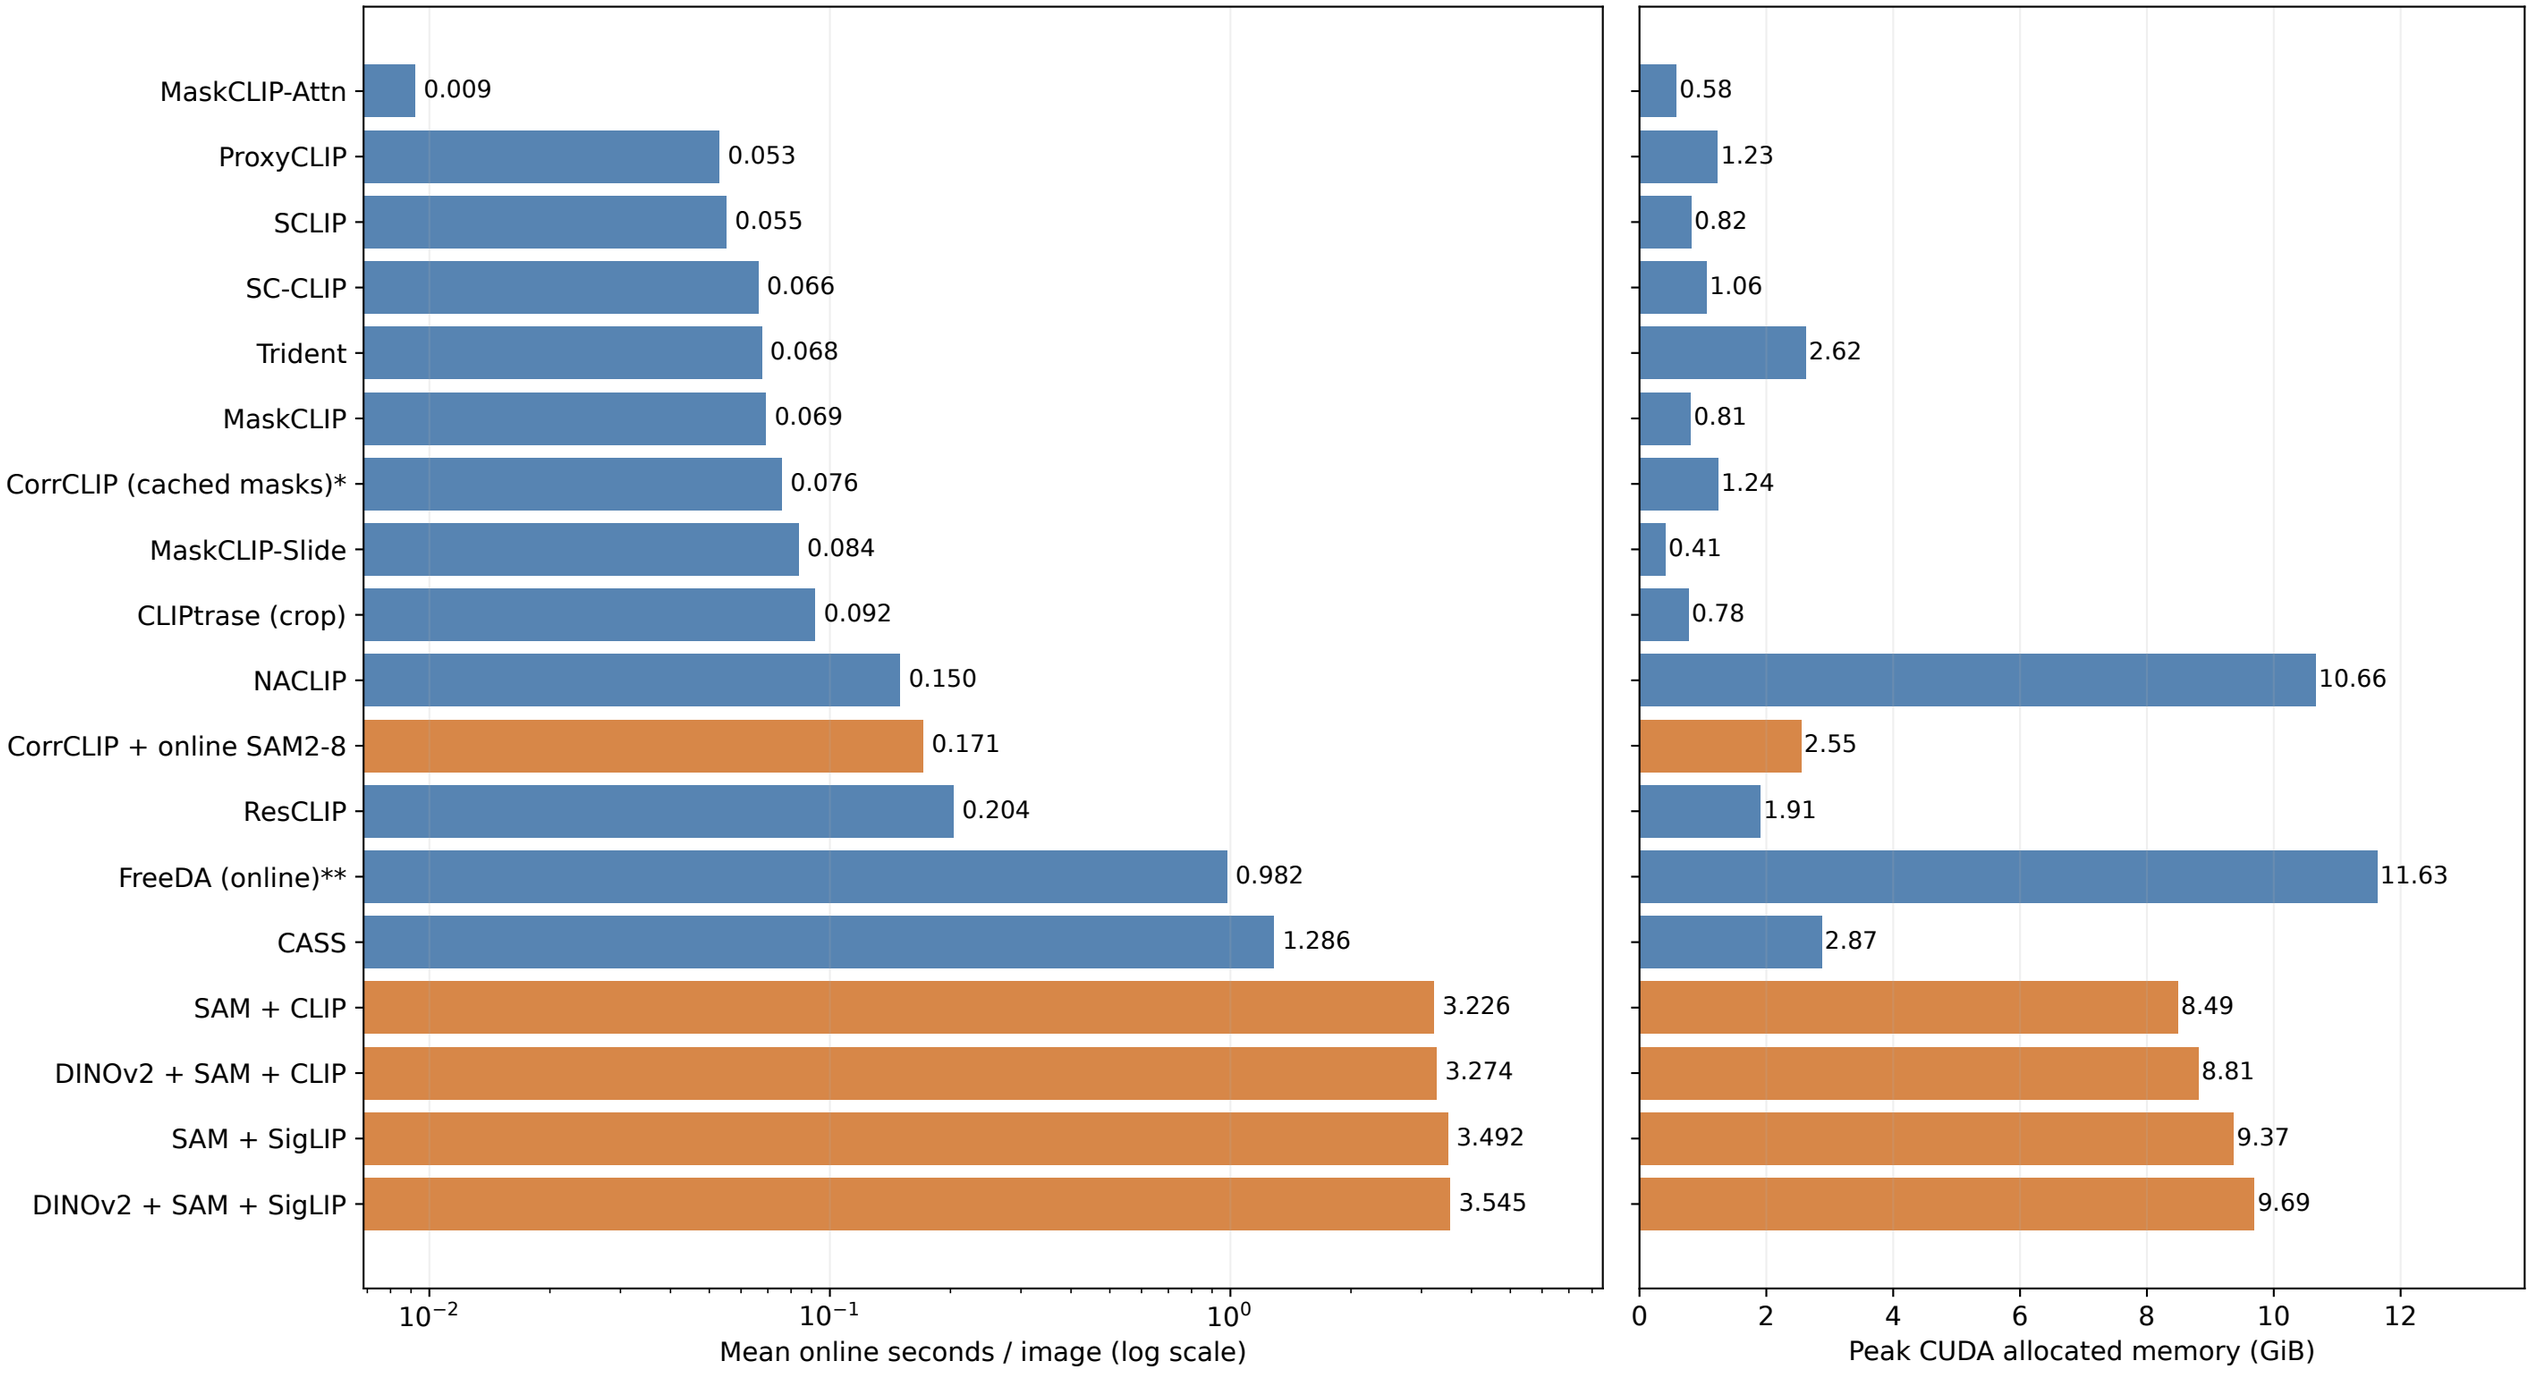
E4 isolated runtime remeasurement — A100 80GB, batch 1, 100 common images



5 warmup + 25 timed images per dataset; native resolution / precision retained. Disk IO and class setup excluded.
* Cached-mask consumer only: not end-to-end. Online SAM2-8 is a separate recipe; quality is not paired.
** FreeDA uses an existing offline corpus and Torch 1.12.1; other rows use Torch 2.12. CLIPtrase returns a center crop.
